What's New In Pidgin Nudge Plugin?

What it does? If you are a power user of Pidgin, you might have faced one or more problems when you are trying to react to a nudge or a buzz. You might have been waiting for a long time in between before the conversation window gets animated, or if you have any problem with long delays, you might have given up. The solution is to add a plugin that will give you the immediate feedback when you are receiving a nudge, even if it is sent by a non-nudge-aware contact. How it works? The Pidgin Nudge Plugin is based on XMPP's presence feature. When a contact sends you a nudge, you will get a Notify event in your statusbar. This plugin has been written to make use of this feature. Pidgin Nudge Plugin will check with the XMPP server when it is time to nudge you. The time gap can be configured by the user. Pidgin Nudge Plugin is able to animate your conversation window in accordance to the rules specified in the configuration file. The option is to only animate the conversation window or the entire client window. Pidgin Nudge Plugin can also be configured to not vibrate the screen when it shakes. The option can be configured to vibrate in any interval you want, just not at all. Additionally, the nudge sound and beep can be configured for each nudge. Contact nudge behaviour There are some parameters that can be configured with the nudge behaviour, or the settings that determine what kind of nudge behaviour you will get. These parameters can be changed from the options dialog of the plugin. The settings are saved and you will get the new nudge behaviour after you restart Pidgin. Please note that the settings can only be changed when there are no chats open. In all cases, the plugin will not generate a nudge if the contact is not nudge-aware. Contact settings --allow_nudge - Whether to allow nudge from unknown contacts. The default is to allow only nudge from known contacts. --allow_zap - Whether to allow zap from unknown contacts. The default is to allow only zap from known contacts. --allow_tickle - Whether to allow tickle from unknown contacts. The default is to allow only tickle from known contacts. --delay - The delay in milliseconds until you are nudged. --nudge_sound - The sound to play when you receive a nudge. --shaken - Whether the conversation window is animated. The default is no animation. --transient - Whether the animation of the conversation window will be transitingory. The default is no transient animation. --title -
