Good day, I am using the following script, which finds a text that is fixed. I need this to happen on each row (a FK is used to select a row from one table). The script works well when I run it directly from the SQL console, but fails to run when I run it from vbsscript. The error reported by the vbs script is: 'Operator not defined: text = "Text Line" I have debugged it to see that the script is working as it should, in the SQL console, but when it runs from the vbsscript the function finds a different line. When I run this from the SQL console, I get the correct line. Any suggestions? c6a93da74d
